**Dragonflies of rice fields in the LEGATO-sites**

Dr. Jürgen Ott (L.U.P.O.GmbH, Trippstadt / UFZ, Halle)

**Rice fields as biotopes**

**Damsel flies and dragonflies**

**Variable Whip (Agrionemis femina)** – male (left) and female (right): A tiny little damselfly, widely distributed in SEA and varying in color, often found in rice fields.

**Indigo Dropwing (Trithemis festiva)**: Occurs in disturbed habitats and well-vegetated swamps, also in abandoned paddy fields.

**Scarlet Grenadier (Lathrecista asiatica)**: Widespread in tropical Asia and inhabiting coastal swamps and marshes, also found in shady forests.

**Trumpet tail (Acisoma panorpoides)**: Found in disturbed habitats and well-vegetated swamps, also in abandoned paddy fields.

**Common Amberwing (Brachythemis contaminata)** – it is very common in SEA and found a wide variety of waters: along well-vegetated channels, in ponds, but also in very open rice fields and fish ponds.

**Pied Percher (Neurothemis tullia tullia)**: Common species in SEA and found in many habitats, ponds, marshes, and also in rice fields.

**Variegated Green Skimmer (Orthetrum sabina)** – pairing wheel: Widespread in SEA and occurs up to the Mediterranean; it inhabits a wide variety of habitats.

**Common Redshank (Orthetrum pruinosum neglectum)**: Common all over SEA and occurring in many habitats, in marshes as well as in disturbed waters, and also in rice fields.

**Blue Percher (Diplacodes trivialis)**: Common all over SEA and occurs in many habitats, in marshes as well as in disturbed waters, and also in rice fields.

**White-barred Duskhawk (Tholymis tillarga)**: Widespread in tropical and subtropical Asia, Africa and Australia, a common and crepuscular species.

**Common Red Skimmer (Orthetrum pruinosum neglectum)**: Common in SEA and occurring in many habitats – slow streams, ponds, irrigation channels, rice fields.

**Russet Percher (Neurothemis fulvia)**: Found in slow running streams, but also in cultivated and disturbed habitats, such as tanks, irrigation channels and rice fields.

**Russet Percher (Neurothemis fulvia)**: Occurs in disturbed habitats and well-vegetated swamps, also in abandoned paddy fields.

**Common Redbolt (Rhodothemis rufa)**: In well-vegetated water bodies where it perches on the vegetation, widespread in tropical Asia.

**Black-tipped Percher (Diplacodes neglectus)**: Widespread in SEA but not frequently found, mainly inhabiting marshes and shallow ponds in open areas.

**Common Scarlet (Crocothemis servilia)**: Common in SEA and occurs in different habitats, from disturbed waters to well-vegetated waters.

**Variable Whisp (Agrionemis femina)** – male (left) and female (right): A tiny little damselfly, widely distributed in SEA and varying in color, often found in rice fields.

**Indigo Dropwing (Trithemis festiva)**: Occurs in disturbed habitats and well-vegetated swamps, also in abandoned paddy fields.

**Scarlet Grenadier (Lathrecista asiatica)**: Widespread in tropical Asia and inhabiting coastal swamps and marshes, also found in shady forests.
